DETAILED ACTION

Response to Amendment

Applicant argues that either Barker or Yakata does not describe a cover sheet that includes both machine readable and tactilely readable information, where the tactilely readable information relates to or describes one or more user selectable parameters.

In reply, Barker discloses the cover sheet has user selectable parameter (e.g., selectable parameters 88, 82, figure 3) to be read by the user and select by the user at least one of the one or more user selectable parameter (e.g., selectable parameters 88, 82, figure 3).

Barker does not teach a cover sheet including tactilely readable information.

Yakata discloses a label (similar to cover sheet) including tactilely readable markings (braille) available to the visually impaired and encoding information which can be read by an optical reader (paragraphs 0005 and abstract).

Since a blind person would be a user and the only way that a blind person can use Barker's cover sheet and select the parameter in the cover sheet is to provide the user with tactilely reading markings includes information regarding one or more user selectable parameters such that the user can tactilely reading the cover sheet and selecting the at least one of the one or more user-selectable parameters and scanning a document using the cover sheet.

Application/Control Number:

10/736,663 Art Unit: 2625

Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Barker to include including tactilely readable markings (braille) available to the visually impaired as taught by Yakata includes information regarding one or more user selectable parameters such that the user can tactilely reading the cover sheet and selecting the at least one of the one or more user-selectable parameters and scanning a document using the cover sheet. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Barker by the teaching of Yakata includes information regarding one or more user selectable parameters such that the user can tactilely reading the cover sheet and selecting the at least one of the one or more user-selectable parameters and scanning a document using the cover sheet because it would have allow visually impaired person having privileged to fax a document.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Barker et al. (Barker) (US 6,646,765) in view of Yakata (JP 10275206).

With regard to claim 1, Barker discloses a method for making written documents (column 7, lines 35-55 teaches composing/making a cover sheet with

Application/Control Number:

10/736,663

Art Unit: 2625

a document), comprising: generating a cover sheet (e.g., figure 3, column, lines 44-45), including machine readable information and scanning a document using the cover sheet (column 7, lines 35-56), the cover sheet has user selectable parameter (e.g., selectable parameters 88, 82, figure 3) to be read by the user and select by the user at least one of the one or more user selectable parameter (e.g., selectable parameters 88, 82, figure 3).

Barker does not teach a cover sheet including tactilely readable information.

Yakata discloses a label (similar to cover sheet) including tactilely readable markings (braille) available to the visually impaired and encoding information which can be read by an optical reader (paragraphs 0005 and abstract).

Since a blind person would be a user and the only way that a blind person can use Barker's cover sheet and select the parameter in the cover sheet is to provide the user with tactilely reading markings includes information regarding one or more user selectable parameters such that the user can tactilely reading the cover sheet and selecting the at least one of the one or more user-selectable parameters and scanning a document using the cover sheet.

Therefore it would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Barker to include including tactilely readable markings (braille) available to the visually impaired as taught by Yakata includes information regarding one or more user selectable parameters such that the user can tactilely reading the cover sheet and selecting the at least one of the

Application/Control Number:

Art Unit: 2625

one or more user-selectable parameters and scanning a document using the cover sheet. It would have been obvious to one of ordinary skill in the art at the time of the invention to have modified Barker by the teaching of Yakata includes information regarding one or more user selectable parameters such that the user can tactilely reading the cover sheet and selecting the at least one of the one or more user-selectable parameters and scanning a document using the cover sheet because it would have allow visually impaired person having privileged to fax a document.

With regard to claim 3, Barker discloses wherein selecting the at least one user-selectable parameter includes checking a box on the sheet (column 5, lines 14-43, figure 3).

With regard to claim 4, Barker discloses wherein the at least one user selectable parameter includes at least one email address (column 5, lines 14-43, figure 3).

With regard to claim 5, Barker discloses wherein the at least one user selectable parameter includes a database (column 9, lines 45-67).

With regard to claim 6, Barker discloses wherein the at least one user selectable parameter includes a group printer (column 2, lines 20-26).

With regard to claim 8, the subject matter is similar to claim 1. Therefore the rejection on claim 8 is the same as rejection on claim 1.

With regard to claim 11, Barker discloses wherein the user selectable markings include at least one email address (column 5, lines 14-43, figure 3).

Art Unit: 2625

With regard to claim 12, Yakata discloses wherein the tactilely readable markings include Braille (paragraph 0005).

With regard to claim 13, Barker discloses wherein the machine readable markings include a bar code (figure 3, block 54).

With regard to claim 14, Barker discloses wherein the machine readable markings includes glyphs (column 5, lines 14-43, figure 3).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Quang N. Vo whose telephone number is 5712701121. The examiner can normally be reached on 7:30AM-5:00PM Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, King Y. Poon can be reached on 5712727440. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
